For Release August 18, 2016.

### **Mill-Rose Expands Selection of Mini/Micro Brushes for Industrial and Medical Use**

Small parts like these [Mill-Rose micro brushes](#) can play a big role in your next production. Mill-Rose is uniquely suited to manufacture brushes as tiny as .014 in diameter to clean, polish, debur and ream small holes and cavities using a full range of bristle materials, including stainless steel, brass and nylon.

[Miniature abrasive tube brushes](#) are also available for aggressive cleaning and deburring holes drilled in close-tolerance metallic and non-metallic parts. These brushes are flexible, designed to retain their shape better than wire-fill

brushes, and will not degrade the diameter, straightness or surface finish of the holes. These silicate and aluminum-oxide brushes are designed for power use.

Mill-Rose also manufactures a complete line of [micro twisted wire brushes](#) used in medical applications, including microbiology and cytology sampling, cleaning endoscopes and other medical instruments, and custom-design applications for precision instruments. These micro/mini brushes can be supplied in a full range of materials that include stainless steel, brass, bronze, gold, silver, titanium, molybdenum and other exotic materials. Synthetic fibers can also be used, including nylon, polyethylene, styrene, Herox<sup>®</sup>, and Tynex<sup>®</sup>.

Bristle materials range in thickness from 0.0025” and uniform diameters are accurate to  $\pm .001$ ”. Loop handles make the micro brushes easy to use for hand application and brushes are also available without loop handles for power applications.

Mill-Rose offers a full-service engineering department that works closely with manufacturers in developing [custom-designed brushes](#) for new applications. For more information, contact The Mill-Rose Company, 7995 Tyler Blvd., Mentor, Ohio. Call toll-free 800.321.3533 or visit [www.MillRose.com](http://www.MillRose.com).
